SUMMARY

Full-stack developer skilled in Python and JavaScript (ES6+), with production experience shipping React / Node.js / MongoDB web applications end-to-end — from REST API design to live deployment. Brings hands-on machine learning experience from an internship at EdUPro, where a clustering and recommendation pipeline was built, benchmarked, and validated using scikit-learn, PCA, and silhouette analysis, plus an independent optimization project modeling lead time and profit margin across a multi-factory supply network. Writes modular, tested, well-documented code and communicates technical reasoning clearly.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), Java, HTML5, CSS3

Web & APIs: React.js, Node.js, Express.js, REST APIs, Firebase

Database: MongoDB Atlas, NoSQL Schema Design

ML / Data: scikit-learn, K-Means Clustering, PCA, Predictive Modeling, Streamlit

Testing & Tooling: Edge-Case & Regression Test Suite Design (pytest), Git, CI/CD (Vercel, Render)

Currently learning: Native Android development (Kotlin), advanced Express.js

INTERNSHIP EXPERIENCE

Machine Learning Intern — EdUPro (Remote)

Learner Intelligence Platform · Python, scikit-learn, Streamlit, K-Means Clustering, PCA · github.com/anubhavmaurya22/EduPro-LearnerIntelligence-Platform

- Built an end-to-end ML pipeline that segments 2,000 CPD-platform users into 4 behavioral archetypes via K-Means clustering, feeding a hybrid recommendation engine that replaced a single generic course list with personalized picks per user.
- Benchmarked and validated model quality using PCA, the elbow method, and silhouette analysis before promoting the pipeline to production.
- Designed and deployed a 6-page interactive Streamlit dashboard — platform overview, per-professional drill-down, live recommendations, cluster visualization, and business analytics — giving non-technical stakeholders self-serve access to model output.
- Wrote a dedicated edge-case test suite and managed dependencies via requirements.txt, iterating across 30+ commits to harden the pipeline for production.

PROJECTS

Nassau Candy Distributor — Factory Optimization Dashboard | Python, scikit-learn, Streamlit, pytest · GitHub:

github.com/anubhavmaurya22/Nassau-Candy-Factory-Reallocation

- Built a factory-reallocation optimization pipeline that cleans raw order data, engineers features, and trains lead-time and profit-margin models to score every product against every candidate factory.
- Designed a 4-page Streamlit dashboard (Factory Simulator, What-If Analysis, Recommendation Dashboard, Risk & Impact Panel) with plain-language explanations generated for every recommendation.
- Added a feedback logging widget and a demo-grade role-based access gate (Manager view) for aggregated feedback, clearly scoped as production vs. demonstration-only.
- Wrote a 29-test suite (reference-data integrity, distance calculations, ranking logic, data sanity checks) and documented explicit modeling assumptions where raw data fields were unreliable.

Root Bridge | React.js, Firebase Auth, Real-time DB, Vercel · Live: rootbridge-zeta.vercel.app

- Built a full-stack web app in React with a modular, responsive component system built from scratch.
- Integrated Firebase for real-time data sync and token-based authentication.
- Set up and maintained a CI/CD pipeline on Vercel with continuous rollout on every push.
- Structured application state and data flow across components, mirroring Express.js middleware patterns.

Huddle | Python Backend, MongoDB Atlas, JavaScript Frontend, Render · Live: huddle-in83.onrender.com

- Engineered a RESTful API backend in Python using Express.js-equivalent design principles — routing, request handling, JSON responses — consumed by a JavaScript frontend.
- Designed NoSQL schemas in MongoDB Atlas optimized for efficient querying and persistent storage, with a focus on scalability.
- Configured production deployment on Render: environment variables, build scripts, and health checks.
- Debugged cross-origin (CORS) API integration issues end-to-end between frontend and backend, hardening request/response stability.

EDUCATION

B.Tech, Computer Science — PSIT Kanpur

2024 – Expected 2028

Class XII (Higher Secondary) — Completed 2023 · Class X (Secondary) — Completed 2021
